

FANUC Zero Down Time (ZDT) Subscription

ZDT

Feature

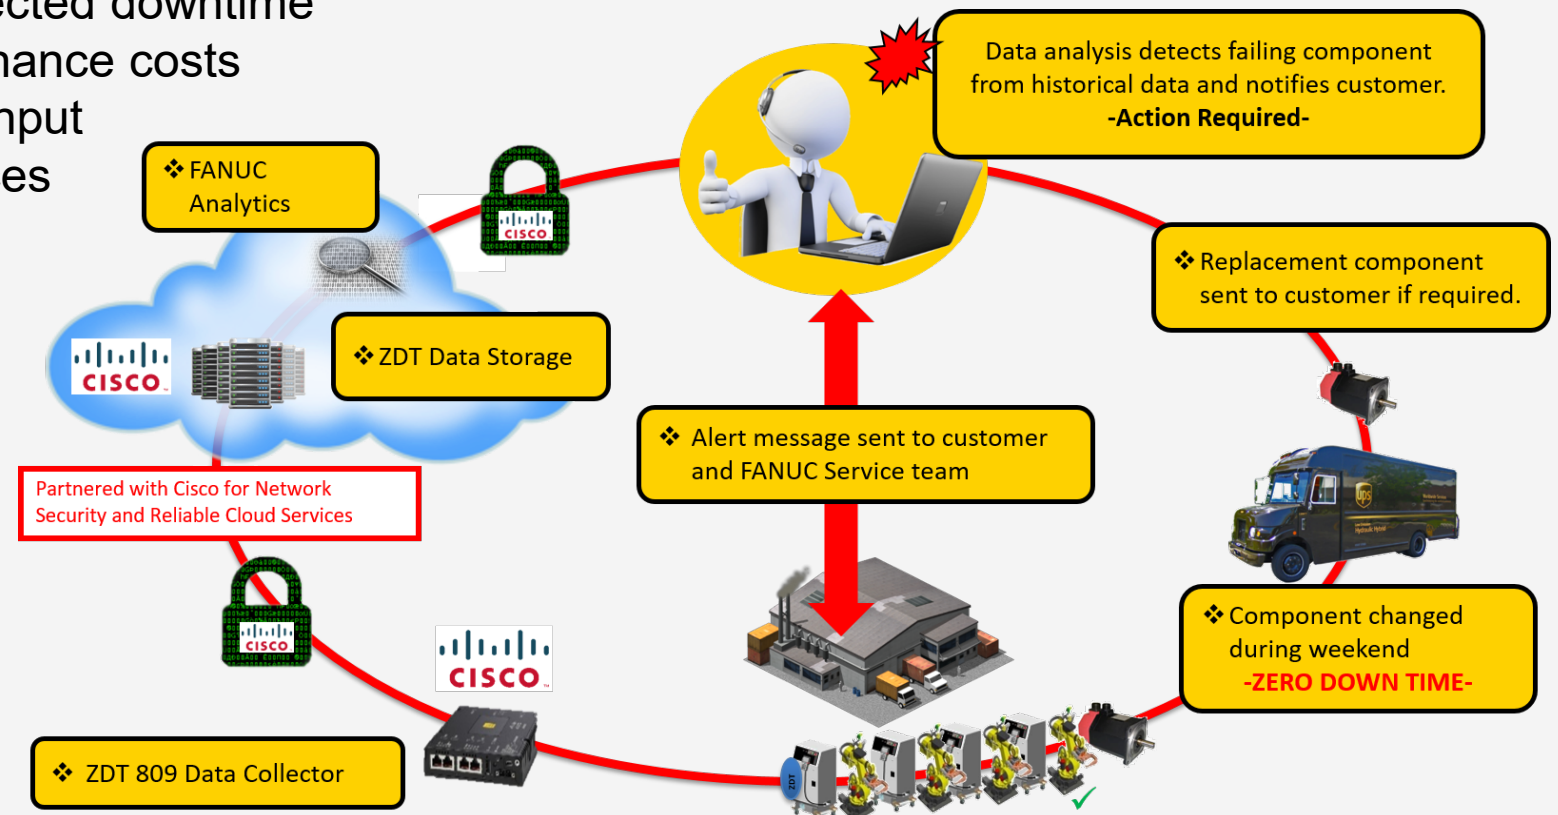

ZDT, a global Internet of Things (IoT) solution, is a subscription-based product (annual renewal required) that leverages the power of big data to monitor the health of FANUC robots. ZDT also tracks each robot's maintenance requirements and identifies when important tasks need to be performed.

Function

- Robot monitoring is done through a web portal accessible anywhere in the world.
- The data from the factory floor is used to recommend changes to minimize costs, improve cycle time, and extend equipment life.

Benefit

- Eliminates unexpected downtime
- Minimizes maintenance costs
- Maximizes throughput
- Optimizes resources
- Extends robot life
